

## **GROUND ROD** 12 AWG

PART# ANO-12

## INSTALLATION INSTRUCTIONS

- Remove Ground Rod and Twist-on Connector from packaging (Fig. 1).
- 2. Uncoil the Copperhead<sup>®</sup> CCS red ground wire away from around the Ground Rod (Fig 1).
- 3. At the grounding location, pound the Ground Rod into the soil by hitting the HDPE cap with a hammer or mallet (Fig 2).
- 4. Strip  $\frac{1}{2}$ " of coating from the end of the red wire.

## Installation with Access Point

(connecting ground rod wire to access point)

- 1. Bring Ground Rod wire to grade.
- 2. Insert the stripped end into the proper Ground Rod terminal on the Access Point (Access Point sold separately).

## Installation where access is not needed (connecting ground rod wire to tracer wire)

- 1. Make sure  $\frac{1}{2}$ " of tracer wire jacket is also stripped at the end.
- 2. Evenly hold the end of the stripped red wire and stripped tracer wire (Fig 3).
- 3. Push wires firmly into Twist-on Connector (provided).
- 4. Twist connector onto wires pushing firmly until tight (Fig 4).
