

## **LMT™ (LINED MAIN TAP) & LMK SADDLE SYSTEMS**

The LMT™ (Lined Main Tap) Saddle System is engineered to connect a lateral sewer service pipe to a liner inside a rehabilitated mainline. The LMK Saddle System is designed to connect a lateral sewer service pipe directly to a mainline pipe. The LMT™ and LMK Saddle Systems can be used for pipes ranging from 6 to 24 inches in diameter.

**LMT™ SADDLE SYSTEM**

**LMK SADDLE SYSTEM**

### **FEATURES:**

- Sized to surround the liner or pipe beyond the spring line, which creates a clamping effect that draws the saddle firmly onto the liner or pipe
- Universal LMK Adhesive bonds the saddle to the liner or host pipe, providing a flexible, non-leaking main-to-lateral connection. A special two-part adhesive is available for HDPE liners/pipes
- Compatible with CIPP and fold & form liners
- Compatible with a variety of pipes including cast iron, clay, concrete, PVC & HDPE
